

BULK JOB STATUS

When Actions, Sequences, Evaluations, or Monitors are run, they become Jobs. You can view Jobs and their results in a number of ways.

You can also generate HTTP/HTTPS or syslog notifications to send to a specified destination that ingests machine data, such as Splunk or Elasticsearch, by selecting the Notification Formats menu option.

You can access these Job features by going to the Jobs menu on the navigation bar.

The Validation Platform supports parallel Job execution, with the following limitation:

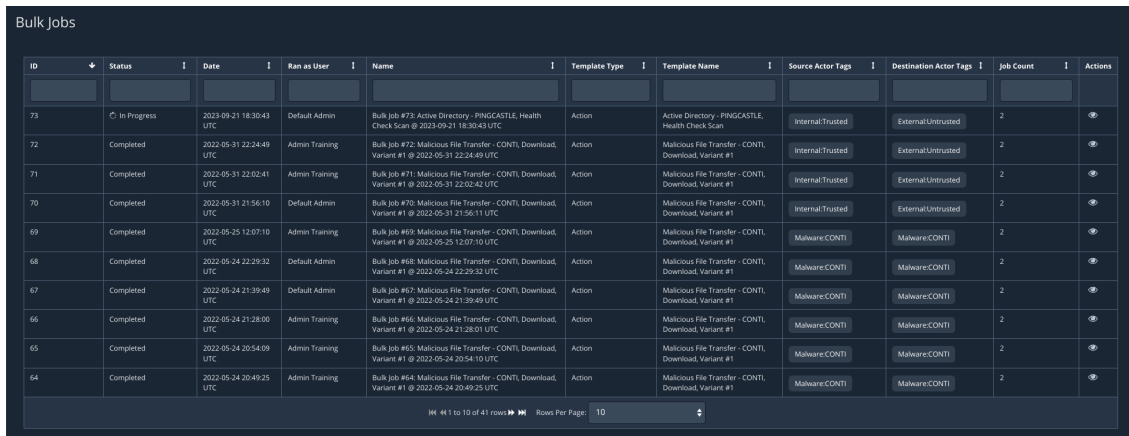

- When an Actor is involved in multiple Jobs, the Jobs will be queued in the order they are received.

This limitation means any Actors queued for Job one will be unavailable to Job two until Job one is complete, therefore queuing all Job two Actions. Jobs may contain one or more Job Actions, which involve up to two Actors.

When you run a bulk Action (see [Running Bulk Actions \(https://docs.mandiant.com/home/running-bulk-actions\)](https://docs.mandiant.com/home/running-bulk-actions)), Evaluation (see [Running Bulk Evaluations \(https://docs.mandiant.com/home/msv-running-evaluations#Running\)](https://docs.mandiant.com/home/msv-running-evaluations#Running)), or Sequence (see [Running Bulk Sequences \(https://docs.mandiant.com/home/msv-running-sequences\)](https://docs.mandiant.com/home/msv-running-sequences)), you can run many Jobs at once by referencing Actor tags rather than Actors. These bulk Jobs are tracked on the Bulk Jobs Result page and on the Bulk Job Status page, shown in the screenshot that follows.

Access Bulk Job Information

1. Open the Bulk Job Status page to view all of the Bulk Jobs by selecting **Jobs > Bulk Jobs**.
