

SCHEDULED JOBS

Jobs that are scheduled to process at a later time can be viewed by accessing the Scheduled jobs.

Scheduled jobs are different from Monitors - they do not send you notifications and you cannot configure them to include the expected outcome.

From here, you can also edit or cancel your scheduled Job.

Create a scheduled Job

1. Go to **Library** and select **Actions, Evaluations, or Sequences**.
2. From the list of Actions, Evaluations, or Sequences that appear, select the one you want to schedule.
3. Click  **Run**.
4. Change *Run Now* to **Schedule**.
5. From the calendar, select the date and time (UTC) when you want the Job to run and then click **Apply**.
6. (Optional) Expand the **Advanced options** and configure the following as needed:
 - a. Enter a **Job name**.
 - b. Set the **Use interface type** and add **Extra Sleep time (seconds)** as needed.
7. Select the **Source Actor** and **Destination Actor** for each Actor or Group.
8. Click **Schedule**.

Schedule a job

You can also schedule a Job and have it repeat. Just select **Repeat Job** and enter how often and how many times you want it to repeat. See **repeating jobs** (<https://docs.mandiant.com/home/msv-repeating-jobs>) for more information.

See **running actions** (<https://docs.mandiant.com/home/msv-running-actions>), **supported actions to run as user** (<https://docs.mandiant.com/home/msv-supported-actions-for-run-as-user>), **running evaluations** (<https://docs.mandiant.com/home/msv-running-evaluations>), or **running sequences** (<https://docs.mandiant.com/home/msv-running-sequences>) to learn about other advanced parameter settings.
