

## ORGANIZATIONS MENU

When you are a member of multiple organizations—for example, you are providing Mandiant Security Validation (MSV) as a service for third parties and they want to change to view a different organization—you can use the **Organizations** switcher located in the MSV header just below the application switcher.

The Organizations switcher toggles to the selected organization context and allows you to view the **Organizations** table that displays attributes of all the organizations to which you have membership, including which is your default organization and which User Group you belong to in each organization (refer to **User Groups and Permissions** (<https://docs.mandiant.com/home/msv-user-groups-and-permissions>) for more details). Mandiant configures these attributes according to the role you play in each organization.

Organizations					
Name	ID	UUID	Description	Default	User Group
FireEye	1		Default description	Yes	System Admin
MSV_Test_Org_A	2		RDV SaaS Organization created for Uyen's personal use	No	System Admin
MSV_Test_Org_D	37		RDV SaaS Organization created for Tommy's personal use	No	Reporting
MSV_Test_Org_1	40		MSV SaaS Organization created for Tommy's personal use	No	Reporting

- MSV organization switcher may be out of sync, in which case, you will need to refresh the browser tab.
- Changing the organization in any other application (e.g., MA-ASM or MATI) does not change the selected organization within MSV.
