

VIEWING BULK JOB RESULTS

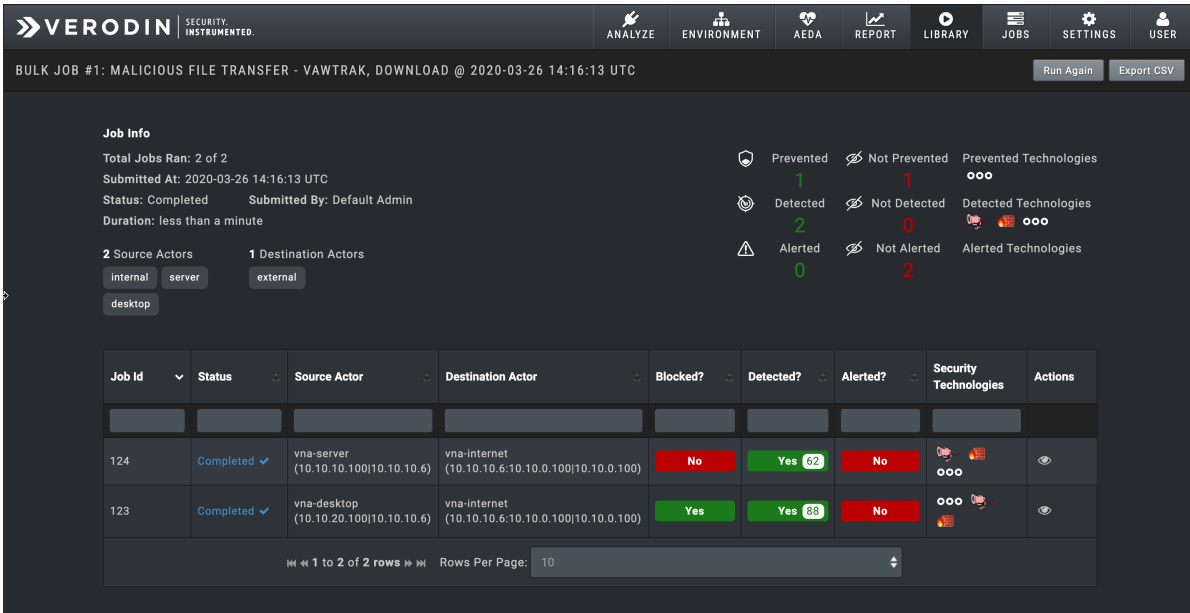

When you run a bulk Action, Evaluation, or Sequence the Bulk Job Results page displays (see the screenshots below). This page displays the following information:

- Name of the bulk Action, Evaluation, or Sequence
- Job info that provides general information about the Job, as well as a progress bar
- Security summary showing an aggregate of what has been prevented, detected, and alerted during this run
- Table showing the individual Jobs that ran.

From the table, you can click **View**  to go to that individual Job's page. This table also displays the Job ID, status, Source and Destination Actors, security technologies, and results for each individual Job.

You can filter results by entering text in one or more column header search field. You can sort by clicking on the column header and you can resize columns, as needed.

Bulk Action Results page - Evaluations with Multiple Groups of Actions

- To export the results, click **Export CSV**.
- Bulk Actions can be run again from the Bulk Job Result page by clicking **Run Again**.

When you choose Run Again, it selects the same Actor Tags and parameters. The original Job is not overwritten.

For bulk endpoint Actions, the Bulk Action Result page is similar, but notice in , there is only one Actor column (the endpoint Actor). You can also view the CLI log for each individual Job.

Bulk Action Result page - Endpoint Action

When you click **View** for an individual Job that ran as part of the bulk Action, the standard Job Results page displays for that Job.

Bulk Job Export Fields

Field Title	Description	Field Format
Job ID	ID of the Job that was run	Integer
Status	Status of Job that was run	String
Source Actor	Indicates source Actor (IP address of source Actor)	String
Destination Actor	Indicates destination Actor (IP address of destination Actor)	String
Endpoint Actor	Indicates Actor for the endpoint	String
Blocked	Indicates whether Action was blocked	Boolean (True/False)
Detected	Indicates whether Action was detected	Boolean (True/False)
Alerted	Indicates whether an Alert was created	Boolean (True/False)
Security Technologies	Indicates whether if Security Technologies are present	String
