

RESTARTING AND REBOOTING ACTORS

You can restart the Actor service, reboot the Actor, or refresh the Actor information if you made changes to it from the command line.

1. Select **Environment > Actors**.
2. Locate the Actor you want and then click **Edit**.
3. Click one of the three buttons along the top of the page:
 - **Restart Services:** Restarts and resets the Actor processes currently running.
 - **Refresh Actor Info:** Redisplays the information shown on the page with any updates.
 - **Reboot:** Stops the Actor entirely at the operating system level and restarts it.
