

## CREATING SEQUENCES OR EVALUATIONS FROM A FILE

There are two ways to create Sequences and Evaluations from files: starting with a file or starting with a template.

Both these processes create new Actions that are then added to the Action Queue to create your new Sequence or Evaluation.

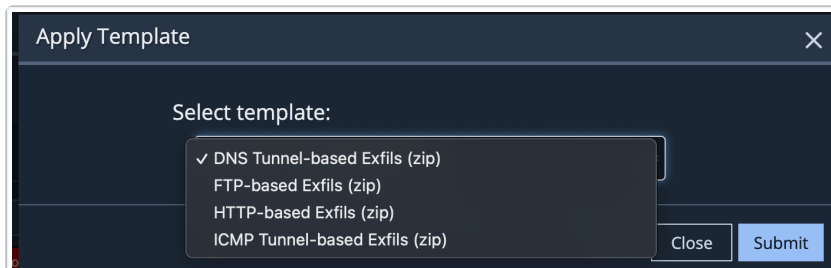

The Action Queue allows you to select a group of content from the library and then work with them to build Sequences, Evaluations, or just run the group immediately without saving it. The Action Queue is also used when you create a copy of an existing Sequence or Evaluation.

### Create Sequences and Evaluations from a File

1. Go to **Library > Files**.

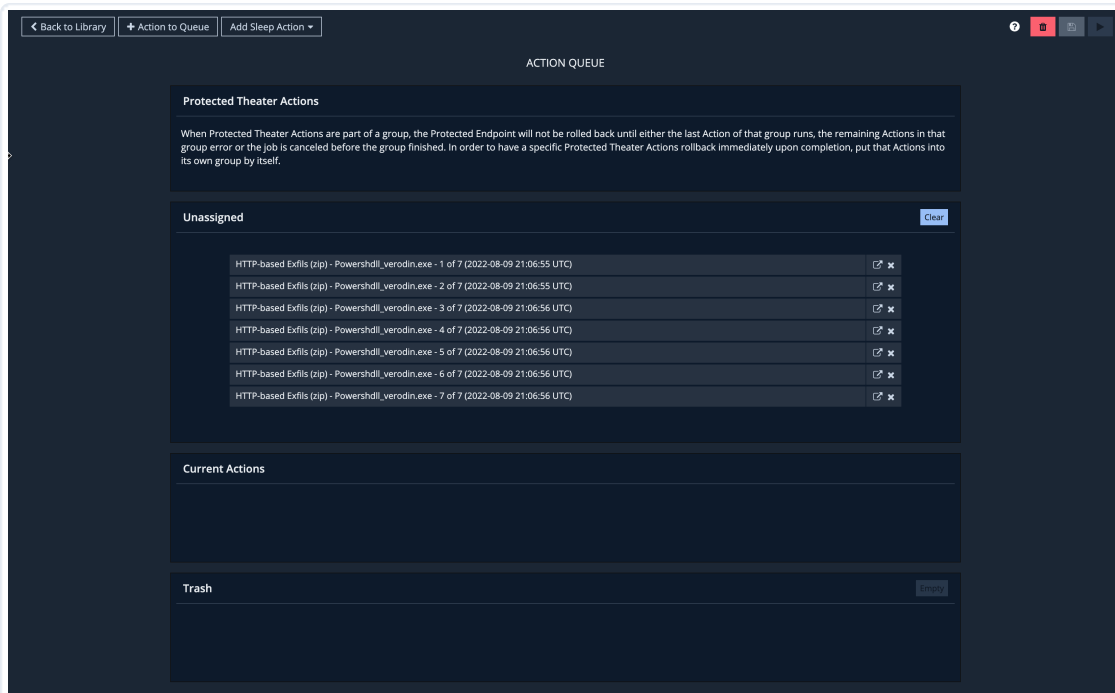

The File Library appears.

2. Locate the file you want to use in the Action, and click **Apply Template**, . The Apply template form opens.
3. Select the template you want to use and click **Submit**. The Actions Queue opens to display the Actions that were created.

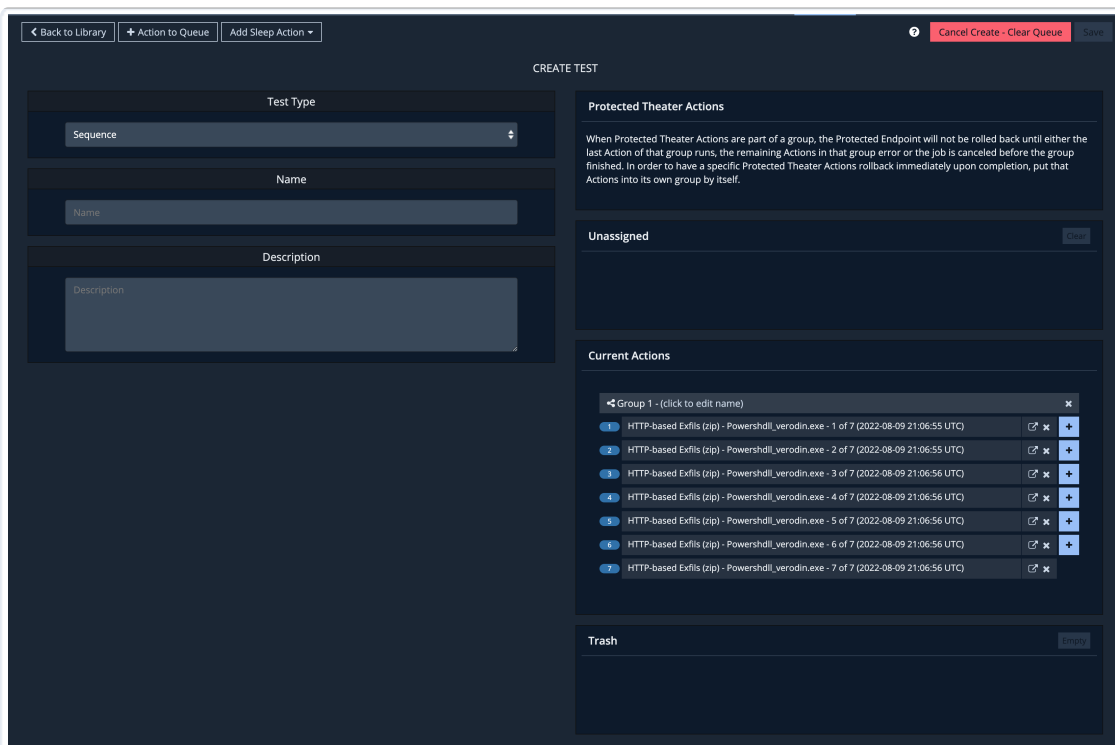

Apply File Template

- New Actions are created.
  - The Actions Queue opens to display these new Actions in the unassigned section.
4. (Optional) Click and drag any or all Actions from **Unassigned** to **Current Actions**, then select **Run Ad Hoc** . This will allow you to run the group of Actions without creating an Evaluation or Sequence.
5. Click and drag any or all Actions from **Unassigned** to **Current Actions**, then select **Save**. This switches the view and brings up the Create Test view/form.

Create Test form

6. Fill out the Create Test form.

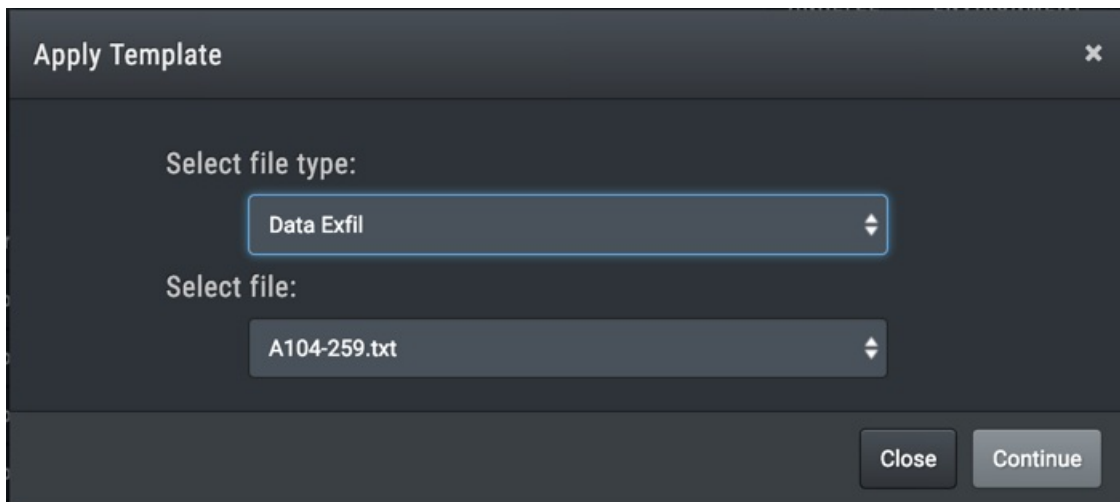

- a. Select the Test Type.
- b. Enter a Name.

c. Enter a Description.

7. Click **Save**. The Evaluation or Sequence is created, and its run page is displayed.

### Create Sequences and Evaluations from a Template

1. Go to **Library > Files**.
2. Click **Templates**. The Templates Library appears.
3. Locate the Template you want to use and click **Apply Template**, .
4. Select the file type, either **Unrestricted (Safe)** or **Restricted Malicious**. This will automatically change the File list to match the type selected.
5. Select the File and then click **Continue**.

Apply a template to a file

6. Fill out the basic test information.
  - a. Select the Test Type.
  - b. Enter a Name.
  - c. Enter a Description.
7. (Optional) Click Add Sleep Action and define the **Time in minutes**.
8. (Optional) Click and drag any or all Actions from **Unassigned** to **Current Actions**, then select **Run Ad Hoc** .
9. Click and drag any or all Actions from **Unassigned** to **Current Actions**.

CREATE TEST

Test Type  
Evaluation

Name  
New HTTP-based Exfil

Description  
This Evaluation will test your data exfil security controls

Protected Theater Actions

When Protected Theater Actions are part of a group, the Protected Endpoint will not be rolled back until either the last Action of that group runs, the remaining Actions in that group error or the job is canceled before the group finished. In order to have a specific Protected Theater Actions rollback immediately upon completion, put that Actions into its own group by itself.

Unassigned Clear
