

SECURITY ZONES

The Security Zones page displays a brief summary of the platform's Security Zones, including names, descriptions, and the attribute assignments they have, if any.

You can add, view, and delete Security Zones from this page.

Name	Description	Attributes	Actions
Internet	Default Internet zone	External	 
Internal Servers	Default Internal Servers zone	Internal	 
Desktop Users	Default Desktop Users zone	Internal	 
DMZ	Default DMZ zone	Internal	 

Security Zones

The Validation Platform has four security zones by default: *Internet*, *Internal Servers*, *Desktop Users*, and *DMZ*. While the preset zones cover common categories, most people need to add additional zones to identify specific areas of their environment, such as different security zones in your network, business departments, regions of stores, different buildings, and so on. Think of security zones as tags for logical groupings in your environment.

When creating security zones, you are not limited to any particular area or category; you can create as many zones as you need to organize your environment.

The attributes associated with security zones impact other elements of the platform's functionality, including the Heat Map, Data Exfiltration Report, and Run Recommended.

Add Security Zones

1. Launch the Director.
2. Select **Environment > Security Zones**.
3. Click **Add Security Zone**.
4. Type the *Name*.
5. Type a *Description*, if necessary.
6. Select the security zone's attribute(s).

Attribute assignments affect several areas of the platform. In the Heat Map, attributes are represented as the Attacker Location dimension option. In the Data Exfil Report, only Actions between security zones with the Internal or External attributes appear. For Actions provided in Security Validation content packs, attributes map to Source and Destination tags, which determine the source and destination Actors used in the Run Recommended option.

 Add Security Zone form

7. Click **Create Security zone**; the new zone will be added to the table.

Edit Security Zones

1. Launch the Director.
2. Select **Environment > Security Zones** to see all available security zones.

3. Click edit  next to a security zone entry and make changes as needed.

Delete Security Zones

1. Launch the Director.
2. Select **Environment > Security Zones**.
3. Click  **Delete**.
