

## ADD A FILE TO THE ENDPOINT FILE LIBRARY

The Endpoint File Library is used for getting files to Actors in a Protected Theater. For example, you could upload the Validation Platform Endpoint installer executable file, or if you wanted to install a certain Microsoft package onto the Actor, you could add it on the Endpoint File Library page.

The Actor installers can also be found in the Actor Installer Files library ( [Library > Actor Installer Files](#)).

Filename	Size	SHA256	Timestamp	Action
<a href="#">VerodinEndpoint-4.8.4.1-7-x86.exe</a>	29919792	5bd0eddeda809d6431807cead90bdc57bb2930ff2517e271d5b037c2fbd544c	-	
<a href="#">VerodinEndpoint-4.8.4.1-7.exe</a>	31942976	188211a1243becdf1ef4a30aaeae4c3ace149104db842351e37a3b7aa8d79296	-

Endpoint File Library

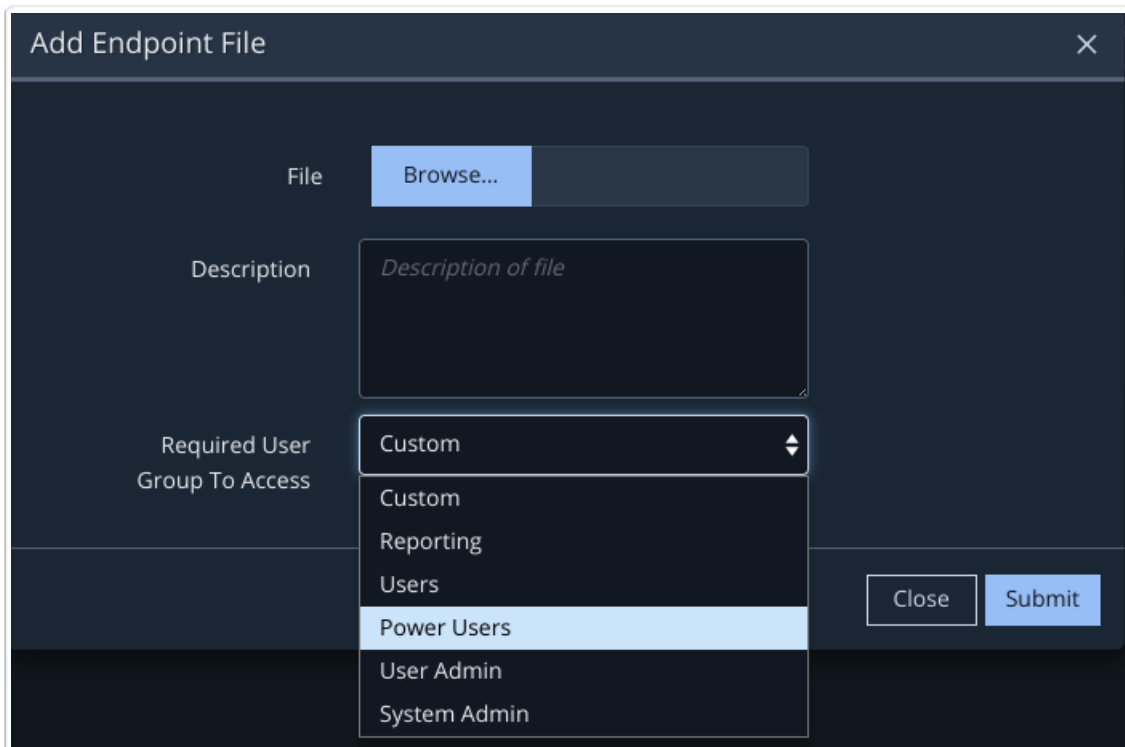

The default upper limit is 300 MB, but this value is determined by the **Maximum Size for Data Exfil and Malicious Files** setting. For more information, see [Advanced Settings](#) (<https://docs.mandiant.com/home/msv-advanced-settings>).

### Add a file to the Endpoint File Library

Follow these steps from the system that contains the file you need:

1. From the Director, select **Library > Endpoint Files**.
2. Click **Add File**.
3. Click **Browse** and then select the file.
4. For **Description**, add a description of the file.
5. Select the lowest **Required User Group To Access** that you want to have access to the file.
6. Click **Submit**. When the upload finishes, the window closes and the **Endpoint File Library** table is updated with the file that you uploaded.

Add Endpoint File

File upload window for the Endpoint File Library

Once you have uploaded a file, you can then access it from the Actor by connecting to the Actor through Virtual Network Computing (VNC) or the Console and then going to `https://<director-ip>/files` . For more information, see [Connect to Protected Theater using VNC or the Console](#) (<https://docs.mandiant.com/home/msv-using-the-console-vs-vnc>).
