

PT - SLOW PERFORMANCE IN HYPER-V

If you are seeing performance issues in Protected Theater (PT), it could be a conflict with the OS and Hyper-V both wanting to optimize the disk input and output (I/O). To address this, we suggest only having Hyper-V manage the disk.

To disable OS management of disk I/O

1. Sign into PT using the command line.
2. Run the following command:

```
Echo noop > /sys/block/sda/queue/scheduler
```

3. Exit PT and reboot.
