

## DECEMBER 14, 2022 ASM RELEASE

### Expand Visibility into Your Google Cloud Environment

**Expand Visibility Into Your Google Cloud Environment**

The inbound integration with Google Cloud enables you to use Attack Surface Management to automatically discover assets, identify applications and services and detect relevant security issues.

**MANDIANT ADVANTAGE** ATTACK SURFACE MANAGEMENT

856 Application Entities found

Filters: Type (AwsS3 Bucket, ApiEndpoint, DnsRecord, Domain, EmailAddress, GithubAccount, GithubRepository, IpAddress, Nameserver, NetBlock, NetworkService, Organization, SslCertificate, UniqueKeyword, UniqueToken, Uri)

Entity Details: **mktg-static-site-assets** (NEW) | GCP STORAGE BUCKET | 280 Issues | Project: acme-corp-01 | Location: us-east1 | Anonymous Access Forbidden: True

The Mandiant Advantage Attack Surface Management for Google Cloud is now available.

Head straight to the [integration guide \(https://docs.mandiant.com/home/asm-gcp-integration\)](https://docs.mandiant.com/home/asm-gcp-integration) now.

The inbound integration with Google Cloud enables you to use Attack Surface Management to automatically discover assets, identify applications and services and detect relevant security issues. Discoverable asset types include:

- APIs via API Gateway
- Applications
- Cloud Functions
- Cloud SQL Instances
- Compute
- Storage
- DNS

The integration complements the available integrations with Azure, AWS, GitHub, Akamai, Cloudflare, and GoDaddy, delivering extended visibility across hybrid or multi-cloud environments.
