

THREAT INTELLIGENCE ORGANIZATION SWITCHER

It is possible that you have different levels of access for different organizations under Mandiant Advantage Threat Intelligence (MATI). This may be the case for service providers who work with multiple clients. To support this, MATI provides an organization switcher, which is located in the Threat Intelligence header just below the application switcher.

Your organization memberships are configured by Mandiant and this configuration controls the level of access you have for each organization within MATI. So if you don't appear to have an appropriate access, verify you have the correct organization selected.

- Mandiant Advantage Threat Intelligence (MATI) organization switcher may be out of sync, in which case, you will need to refresh the browser tab.
- Changing the organization in any other application (e.g., MA-ASM or MSV) does not change the selected organization within MATI.
