

ASM ORGANIZATION SWITCHER

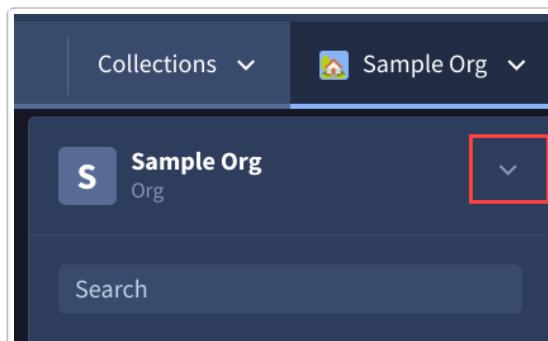

In Mandiant Advantage Attack Surface Management (MA-ASM), an organization is used to manage both users and **Projects** (<https://docs.mandiant.com/home/asm-projects>). It's possible for a user to be a member of multiple organizations.

For more information about organization membership, see [Manage Users in Mandiant Advantage](https://docs.mandiant.com/home/ma-manage-users-in-mandiant-advantage) (<https://docs.mandiant.com/home/ma-manage-users-in-mandiant-advantage>).

When you **create a Project** (<https://docs.mandiant.com/home/asm-create-a-project#create>), that Project is added to your selected organization. To create a Project within a specific organization, ensure that the correct organization is selected before you create the Project. To change your selected organization, follow these steps:

1. From the MA-ASM **Projects and Settings** menu, click  associated with your selected organization (**Org**).

2. Select a different organization from the **Teams** list.

- Your selected organization is denoted by a check mark.
- Changing the organization in any other application (for example, MATI or MSV) does not change the selected organization within MA-ASM.
