

SEARCH SUMMARY

The Search Summary feature in Mandiant Advantage Attack Surface Management (MA-ASM) provides a high-level summary of the current search, helping you to understand the scope of the search. This is significant, especially if you are searching within a large number of Collections.

 The **Search Summary** pane only exists when viewing **Entities**.

The screenshot displays the Mandiant MA-ASM interface. At the top, it shows "6,601 Entities found" and a search bar. Below this, there are filters for "Active Entities" and "Sorted by First seen". The main area lists several entities, each with a URL, a "Mandiant (Auto-Generated)" tag, and a "2 Issues" indicator. On the right side, a "Search Summary" pane is visible, which is highlighted with a red border. This pane provides a breakdown of the search results by category and severity.

ENTITY TYPE	Count
NetworkService	3.2k
Uri	1.4k
DnsRecord	996
Show More	
ISSUE COUNT BY SEVERITY	Count
Critical	0
High	5
Medium	35
Show More	
LOCATION	Count
United States	4.9k
Canada	188
Ireland	8
Show More	
NETWORK	Count
Google LLC	3.7k
Cloudflare, Inc.	934
Amazon.com, Inc.	211
Show More	
TECHNOLOGIES	Count
Cloudflare 2.3	934
Nginx 2.3	336
Web Panel 2.3	196
Show More	

The count listed beside each category represents the number of associated results. Most categories are ranked in descending order of result count. However, **Issue Count By Severity** is ranked by severity, irrespective of the count. You can expand the list for any category by clicking the **Show More** option.

Summary categories include:

- **Entity Type**
- **Issue Count by Severity**
- Geographical **Location** (empty if no data exists)
- **Network** (empty if no data exists)
- **Technologies** (empty if no data exists)

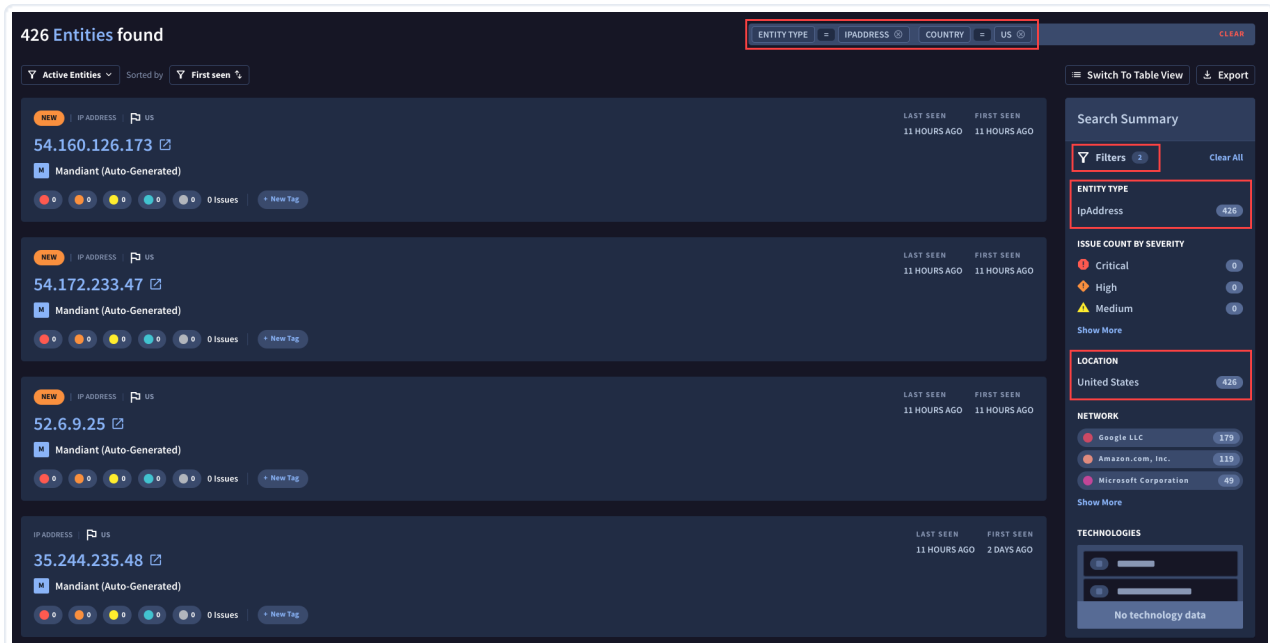

Filter the Search Summary

You can filter Entities by selecting attributes in any categories listed in the **Search Summary** pane. As an example, follow these steps:

In the **Search Summary** pane:

- Click **IpAddress** from the **Entity Type** category.
- Click **United States** from the **Location** category.

These two filters are automatically applied. Both filters appear in the search bar and are reflected in the **Filters** count within the **Search Summary** pane.

The screenshot displays the Mandiant Search Summary interface. At the top, it shows "426 Entities found" and a search bar with filters for "ENTITY TYPE = IPADDRESS" and "COUNTRY = US". The main content area lists four entities, each with an IP address, a "NEW" tag, and a "Mandiant (Auto-Generated)" tag. The right-hand side of the interface features a "Search Summary" pane with a "Filters" count of 2. This pane includes sections for "ENTITY TYPE" (IpAddress, 426), "ISSUE COUNT BY SEVERITY" (Critical: 0, High: 0, Medium: 0), "LOCATION" (United States, 426), "NETWORK" (Google LLC: 179, Amazon.com, Inc.: 119, Microsoft Corporation: 49), and "TECHNOLOGIES" (No technology data).

You can clear the selected filters by clicking **Clear All** in the **Search Summary** pane, or **Clear** in the search bar.
