

PRODUCT UPDATE 5.10.2.6 - MAY 4, 2023

The Mandiant Advantage Security Validation (MA-SV) team is pleased to announce version 5.10.2.6 of the MA-SV platform.*

To address and help solve recent performance issues, we are requiring every customer to generate new API keys. All current API keys will no longer work as of 5.10.2.6 and will need to be regenerated after this release. This will impact all API calls into MA-SV such as the Splunk app or other automations.. To ensure seamless operation of your environment, **generate a new API key** (<https://docs.mandiant.com/home/msv-creating-api-key>).

* This release announcement was delayed due to an internal error and we have addressed the issue. We apologize for any inconvenience caused.

General Enhancements

- API key changes to enhance system performance and security
- Improved performance for Actor data lookups
- Improved the performance on modifying a file in the Files Library

Bug Fixes

- Fixed performance issues due to API key format
- Fixed an issue preventing TAAM integration from working properly
- Fixed an issue in the "/settings/users" API that prevented the API from returning "user_group_id" and "organization_id"
- Fixed an issue in the "/v2/jobs/<id>.json" API that prevented the API from returning "security_technology"
- Fixed an issue with MA-SV Actor migration that could potentially lead to a license registration race condition
