

## SCAN HISTORY

This feature lets you visualize changes to an Entity over time.

Some use cases include:

- Identifying Issues that have gone inactive.
- Identifying Technologies that have changed.

To access Scan History information, select an Entity and navigate to the **Scan History** tab.

The screenshot displays the 'Scan History' tab for an entity. At the top, there are navigation options: 'Details', 'Scan History' (selected), 'Potential Typosquats', and 'Raw (JSON)'. Below this, a header indicates '10 last scan days' with a legend for 'CHANGED' (green) and 'UNCHANGED' (gray). A timeline of dates from Aug 12 to Aug 23 is shown, with tiles for each day. Tiles for Aug 12-19 are gray, while Aug 20-23 are green. Below the timeline, two panels are shown: 'PREVIOUS SCANS' (Aug 20) and 'CURRENT SCAN' (Aug 23). Both panels show an issue titled 'Missing DMARC Policy' with a 'LAST SEEN 4 Days Ago' label. In the previous scan, the issue is 'Active', while in the current scan, it is 'Inactive'. Below the issue details, JSON snippets are visible, showing the 'dmarc' field changing from 'null' to 'v=DMARC1; p=none'.

Scans where the Entity was seen are listed as tiles. Up to the last 25 scans are provided. Scans where changes to the Entity were observed are represented in green. Grayed scans indicate that the Entity was unchanged for the given date.

The **Previous Scans** section defaults to the most recent scan where a change to the Entity was observed, provided that date differs from the **Current Scan**. You can select any previous scan to compare differences to the **Current Scan**. Select a specific date tile, or use the arrow buttons to toggle through the scans.
