

ASM DNS MADE EASY INTEGRATION

Mandiant Advantage Attack Surface Management (MA-ASM)'s DNS Made Easy integration gives customers more visibility by pulling DNS records from DNS Made Easy directly into the MA-ASM platform as a **Seed** (<https://docs.mandiant.com/home/asm-seeds>).

Adding this integration requires two steps:

1. Locate DNS Made Easy keys.
2. Provide DNS Made Easy credentials to MA-ASM.

Locate DNS Made Easy keys

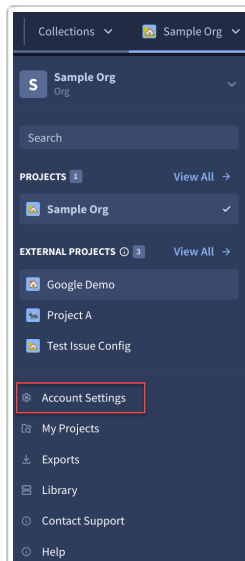

Log into your DNS Made Easy account and access the **Config - Account Information** page. Save the **DNS Made Easy API Key** and **DNS Made Easy Secret Key** values for use in the next section.

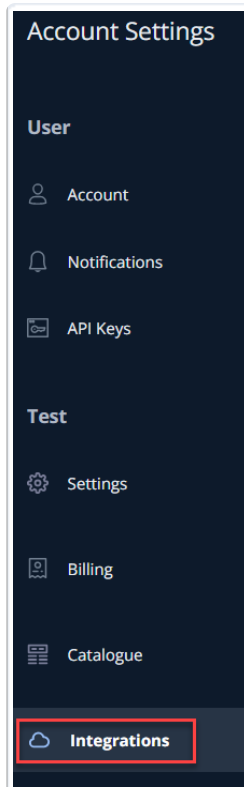

For more for information about authentication, see the **DNS Made Easy API** (<https://api-docs.dnsmadeeasy.com/#5b98221f-37e9-4845-a349-5e959241b4a5>).

Provide DNS Made Easy credentials to MA-ASM

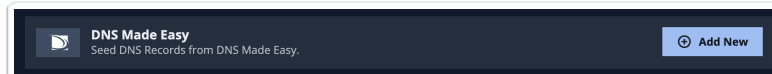

1. From the **Projects and Settings** menu in MA-ASM, select the appropriate Project then click **Account Settings**.

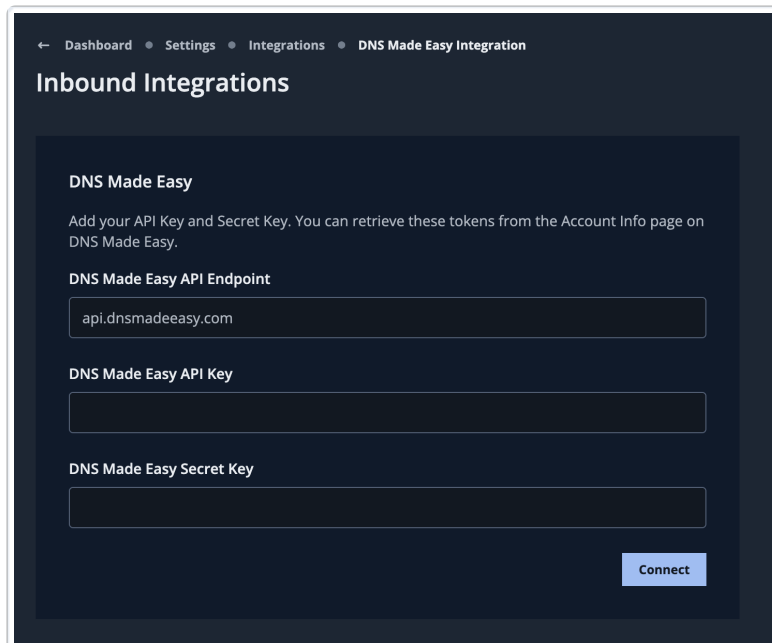

2. Click **Integrations**.

3. From **Inbound Integrations**, select **Add New** for DNS Made Easy.

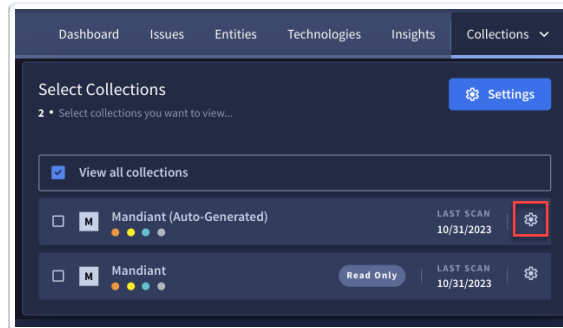

4. Modify your **DNS Made Easy API Endpoint**, if necessary. Enter your **DNS Made Easy API Key** and **DNS Made Easy Secret Key** values from the previous section into the appropriate fields and click **Connect**.

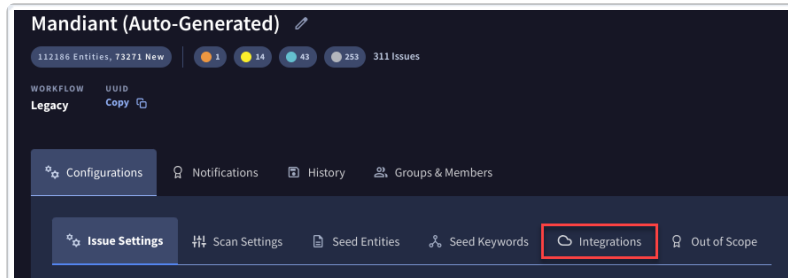

A dark-themed configuration form for the "DNS Made Easy" integration. At the top, there is a breadcrumb trail: "Dashboard > Settings > Integrations > DNS Made Easy Integration". Below this is the title "Inbound Integrations". The form contains a section for "DNS Made Easy" with a sub-header "DNS Made Easy" and a descriptive paragraph: "Add your API Key and Secret Key. You can retrieve these tokens from the Account Info page on DNS Made Easy." There are three input fields: "DNS Made Easy API Endpoint" (containing "api.dnsmadeeasy.com"), "DNS Made Easy API Key", and "DNS Made Easy Secret Key". A blue "Connect" button is located at the bottom right of the form.

5. Connect the integration to the appropriate Collection.

- a. Click **Collections** and click  **Collection Settings** for the Collection that you want to connect the integration to.

- b. Select the **Integrations** tab.

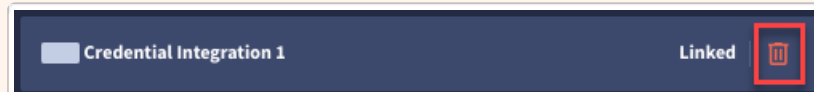

- c. Select **Connect Integration** and **Link** the integration.

The integration is immediately added to the Collection.

Click  to remove the integration from this Collection.

- d. Click  to close the **Connect Integration** pane. Click **Scan Collection** to update your Collection with the current settings and integrations. Otherwise, your newly configured integration is incorporated at your regularly scheduled scan interval.

The screenshot displays the Mandiant interface for a workflow titled "Authenticated cloud discovery & assessment". At the top right, there are two buttons: "Connect Integration" and "Scan Collection", with the latter highlighted by a red rectangular box. Below the title, there are status indicators: "32 Entities, 32 New" and "4 Issues". The workflow name is "Authenticated Cloud Discovery & Assessment" with a "Copy" icon. A navigation bar includes "Configurations", "Notifications", and "History". Below this, there are tabs for "Issue Settings", "Scan Settings", "Seed Entities", "Seed Keywords", "Integrations" (which is selected), and "Out of Scope". The main content area shows a table of integrations with columns for Name, Type, and Created.

Name	Type	Created
