

# AUGUST 17, 2023 MANDIANT ADVANTAGE THREAT INTELLIGENCE RELEASE

## New Version

- Digital Threat Monitoring (DTM) v1.131.16

## New in this Release

- The maximum number of API requests per 24 hours is now limited to 50K.

If you require more than 50K requests in a 24-hour period, contact [Support](#) (<https://docs.mandiant.com/home/mandiant-support-cases>).

## Bug Fixes

- Fixed character count bug in Monitor template name field. Text now reads, "0/256 characters allowed."
- Tooltip for sanitized links now works in **Research Tools Forum Browser** and original post in **Forum** widget when launched from **Research Tools**.
- **Until** date is now updated when a call is made to get new alerts in **Alerts Get** requests, **Alerts Stats** requests, and **New Alerts** existence check.
- Fixed the following **Shop Listing** web console bugs:
  - **Shop Listing Content Sites Visited** and **Host Files** display no longer has issues when a match is selected.
  - **Shop Listing Content** formatting no longer disappears when a match from the **Discovered in Content** section is selected.
  - **Test Monitor Shop Listing Content** section now displays properly.
- Frontend query parameters containing Lucene queries no longer trigger automated Cloudflare exploit detection mechanisms.
