

PRODUCT UPDATE 5.12.1.0 - NOVEMBER 2, 2023

The Mandiant Advantage Security Validation (MA-SV) team is pleased to announce version 5.12.1.0 of the MA-SV platform.

General Enhancements

- Added support for **MITRE ATT&CK versions 13 and 13.1** (<https://attack.mitre.org/versions/v13/>)

Bug Fixes

- Fixed an issue with CrowdStrike LogScale remote integrations that caused an [object object] error in the UI when checking health.
- Fixed an issue where 4.12.0.0 Actors using a proxy configuration did not connect to the Director
- Fixed a logic bug where, in certain cases, Actors might become unresponsive before clearing all their running job status
- Increased the Director relay timeout to help reduce occurrences of Integration Actors timing out while processing large numbers of raw events
- Fixed an issue that prevented security technology detection and discovery for some jobs
- Fixed an issue where some successfully blocked actions were subsequently erroring out due to a missing mimikatz prompt
- Fixed an issue where content for McAfee ESP was incorrectly being mapped as McAfee DLP
- Fixed an issue that prevented proper parsing of a PCAPNG file with an ethernet header

Known Issues

- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involve Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in MSV.
- Remote Integrations require an appliance-based Actor deployment and the Preview Remote Integrations currently retain the same limitation. Support is coming for installer-based Actors with remote integration support prior to full GA of the new Integrations.

Important Installation Notes

As of Actor version 4.12.0.0, we have ended support for Actors on 32-bit architectures, as well as the following OSes: Windows 7, Windows 8.1, Windows Server 2012 R2, and MacOS 10.14 Mojave. **Contact support** (<https://docs.mandiant.com/home/mandiant-support-cases>) if you have any questions or concerns.

In the meantime, you must take the following actions:

- Retire any Endpoint Actors on these platforms
or
- Replace the Actors with ones on supported platforms
