

# NOVEMBER 14, 2023 MANDIANT ADVANTAGE THREAT INTELLIGENCE RELEASE

## New Version

- Digital Threat Monitoring (DTM) v1.143.12

## New in this Release

### • Alert Management

- Available statuses have been updated to allow for a more robust Alert management experience.
- Users can add Tags to each alert.
- Users can now Add Analysis to any Alert including text updates and attachments.
- New Filter bar has been released to allow for a more streamlined search and filter experience.
- The List and Table views in the Alerts tab have been changed to the Standard and Compact views.
- Bulk selection of alerts lets users update the status of multiple Alerts simultaneously from both the Standard and Compact views.

For more information, see the **Triage and Add Analysis to Alerts** tab in **Working with Alerts** (<https://docs.mandiant.com/home/dtm-alerts>).

### • Monitor Management

- Users can now activate or deactivate the Monitor.
- Users can now see who created and last updated the Monitor.
- Tweets have been removed from the list of available Monitor types when creating a new Monitor.

For more information, see **Create DTM Monitors** (<https://docs.mandiant.com/home/dtm-creating-monitors>)

- Card Shop Template and existing card shop Monitors have been updated to use the `bin` topic to allow for more complete matching.
- New DTM **Keyword Volume Summary Dashboard Widget** has been released.
- New DTM **Alert Status Dashboard Widget** has been released.

## Bug Fixes

- Message Alerts no longer show the **Rendered View** tab unnecessarily.
- Navigation issue for Forum Browser Alerts has been resolved.
- Alert context for Compromised Credentials alerts no longer load outside the defined table in smaller browser windows.
- Paste Alerts and Research Tools Documents only show **Rendered View** tab when the content includes HTML code.
