

DECEMBER 5, 2023 MANDIANT ADVANTAGE THREAT INTELLIGENCE RELEASE

New Version

- Digital Threat Monitoring (DTM) v1.143.46

New in this Release

- Research Tools will now enforce a minimum two-character limit to Search.
- Shop Listing Documents and Alerts have been updated to include the **Description** field, if available.

Bug Fixes

- Timestamps for Compromised Credentials alerts have been updated.
- Adding tags that already exist now works correctly without error.
- The Search query will no longer copy between the Alerts and Research Tools tabs.
- The Filter bar placeholder text has been updated.
- On an Alert, one-character tags will no longer create a wide drop-down.
- When using the **Test Monitor** function, users will no longer be able to right-click on an Alert to prevent an error.
- In the Alert List view, if the "Attributes" filter is selected and then deselected, the **Clear Filter** button is disabled.
- The Search bar no longer errors when all filters are selected.
- Certain Forum Post documents will no longer throw errors.
