

## PRODUCT UPDATE 4.12.4.0 - DECEMBER 12, 2023

The Mandiant Security Validation (MSV) team is pleased to announce version 4.12.4.0 of the MSV platform.

### General Enhancements

- As of this release, Assessments is available as a full Public Preview. This means that the feature is available to all customers, but further refinement before full General Availability (GA) is forthcoming. See the [Assessments documentation \(https://docs.mandiant.com/home/msv-assessments\)](https://docs.mandiant.com/home/msv-assessments) for more information.

### Bug Fixes

- Fixed an issue where exported Jobs with 'Job Action Report' checked did not contain detailed Job information
- Fixed an issue where the "Add Integration" dropdown was not fully visible on the screen
- Fixed an issue that was causing a "NoMethodError" for some Job notifications
- Fixed an issue that was causing a "RunUpgradeError" for Director upgrades
- Fixed an issue where users were unable to open VID details when reviewing reports
- Fixed an issue where users were unable to use Captive IOC Actions with a Proxy
- Fixed an issue where Protected Theater Actions A104-775 and A104-777 were stalling without any error
- Fixed an issue where users were unable to import into their Director a pre-generated public/private key pair
- Fixed an issue where if Palo Alto Cortex XDR Queries were removed and then saved, the Queries were not fully removed
- Fixed an issue where users were unable to correctly suppress integration events and "Show All Raw" of the suppressed local host events did not show all the details
- Fixed an issue where the McAfee banner was appearing instead of Trellix for Preview Integrations
- Fixed an issue where the the Can Talk to Network (CTTN) switch wasn't retaining its setting when selected in Scheduled Bulk Job configurations
- Fixed an issue where creating or applying a tag to a VID from the Job View appears to work, but tags were not applied or created
- Fixed an issue where the network map wasn't loading
- Fixed an issue where the TAAM module errored with no notification to user
- Fixed an issue where an integration log file was missing the word "Alerts."

### Known Issues

- When changing an email profile for an Email Action, the Actors are updated in the dropdown but not used for that Action. As a workaround, reselect the desired Actors in the Actor dropdown.
- OVA Directors have the ability to update Preview Integrations. Non-OVA Directors will be able to update Preview integrations in a coming release.
- The Multisite Reporting feature and Preview Integrations service are not working properly with RHEL8 Directors. We are working to resolve this issue as soon as possible.
- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in MSV.

### Appliance OS Security Update

The latest platform security update can always be found on the [Validation Section of the Docs Portal \(https://docs.mandiant.com/home/msv-security-patch-downloads\)](https://docs.mandiant.com/home/msv-security-patch-downloads). This security update applies to all versions of the product and is cumulative.

### Important Installation Notes

Minimum Director version 4.10.0.0 or higher is required to upgrade to version 4.12.4.0.

As of Actor version 4.12.0.0, we have ended support for Actors on 32-bit architectures, as well as the following OSes: Windows 7, Windows 8.1, Windows Server 2012 R2, and MacOS 10.14 Mojave. **Contact support** (<https://docs.mandiant.com/home/mandiant-support-cases>) if you have any questions or concerns.

In the meantime, you must take the following actions:

- Retire any Endpoint Actors on these platforms  
or
- Replace the Actors with ones on supported platforms
