

PRODUCT UPDATE 4.12.4.1 - JANUARY 23, 2024

The Mandiant Security Validation (MSV) team is pleased to announce version 4.12.4.1 of the MSV platform.

Bug Fixes

- Fixed an issue where the Protected Theater was selectable for running Endpoint Actions

Known Issues

- When changing an email profile for an Email Action, the Actors are updated in the dropdown but not used for that Action. As a workaround, reselect the desired Actors in the Actor dropdown.
- OVA Directors have the ability to update Preview Integrations. Non-OVA Directors will be able to update Preview integrations in a coming release.
- The Multisite Reporting feature and Preview Integrations service are not working properly with RHEL8 Directors. We are working to resolve this issue as soon as possible.
- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in MSV.

Appliance OS Security Update

The latest platform security update can always be found on the [Validation Section of the Docs Portal](#) (<https://docs.mandiant.com/home/msv-security-patch-downloads>). This security update applies to all versions of the product and is cumulative.

Important Installation Notes

Minimum Director version 4.10.0.0 or higher is required to upgrade to version 4.12.4.1.

As of Actor version 4.12.0.0, we have ended support for Actors on 32-bit architectures, as well as the following OSes: Windows 7, Windows 8.1, Windows Server 2012 R2, and MacOS 10.14 Mojave. **Contact support** (<https://docs.mandiant.com/home/mandiant-support-cases>) if you have any questions or concerns.

In the meantime, you must take the following actions:

- Retire any Endpoint Actors on these platforms
or
- Replace the Actors with ones on supported platforms
