

TLD LIST

Typosquatting (<https://en.wikipedia.org/wiki/Typosquatting>) is related to misspellings in web addresses. Mandiant Advantage Attack Surface Management (MA-ASM) uses user-provided domains (**Seeds** (<https://docs.mandiant.com/home/asm-seeds>)) and common top-level domains (TLDs) to identify potential typosquat domains that are registered with malicious intent.

The **tlds-alpha-by-domain.txt**  (<https://dyyz9obi78pm5.cloudfront.net/app/image/id/65cb9ae82b825067977d361d/n/tlds-alpha-by-domain.txt>) file provides a list of TLDs that are used for discovery of typosquatted domains in MA-ASM.
