

## PRODUCT UPDATE 4.14.0.1 - MAY 7, 2024

The Mandiant Security Validation (MSV) team is pleased to announce version 4.14.0.1 of the MSV platform.

### Bug Fixes

- Fixed an issue where a 4.14.0.0 upgraded Director didn't restore properly onto a newly installed 4.14.0.0 Director.
- Fixed an issue where Protected Theater wasn't working after a 4.14.0.0 upgrade and got stuck at "Update in Progress."
- Fixed an issue where the vsetnet command did not correctly apply a static IP address.
- Fixed an issue where Windows Actors couldn't select interfaces other than auto for vregister.
- Fixed an issue where Logrhythm SQL integrations events were reported to MSV but did not appear in Jobs.
- Fixed an issue where the TAAM module didn't surface an error message.

### Known Issues

- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in MSV.
- When you add the first MSI integration on a Remote Integrations Actor, the integration does not get detected. To fix this, reboot the Actor after the first MSI integration is selected for that Actor.

### Appliance OS Security Update

The latest platform security update can always be found on the [Validation Section of the Docs Portal \(https://docs.mandiant.com/home/msv-security-patch-downloads\)](https://docs.mandiant.com/home/msv-security-patch-downloads). This security update applies to all versions of the product and is cumulative.

### Important Installation Notes

Minimum Director version 4.12.0.0 or higher is required to upgrade to version 4.14.0.1.
