

PRODUCT UPDATE 5.14.0.1 - JUNE 13, 2024

The Mandiant Advantage Security Validation (MA-SV) team is pleased to announce version 5.14.0.1 of the MSV platform.

Bug fixes

- Fixed an issue where the Network Map was not displaying correctly on various pages in the web interface.

Known issues

- After migrating Actors to the Rocky Linux 8-based VM, Remote Integrations may fail. **Use the steps in this document** (<https://docs.mandiant.com/home/msv-upgrade-rocky-linux#workaround-remote-integrations-fail-to-report-events>) as a workaround.
- When you add the first MSI integration on a Remote Integrations Actor, the integration does not get detected. To fix this, reboot the Actor after the first MSI integration is selected for that Actor.
- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in Security Validation.
