

PRODUCT UPDATE 5.14.0.3 - AUGUST 29, 2024

The Mandiant Advantage Security Validation (MA-SV) team is pleased to announce version 5.14.0.3 of the MA-SV platform.

Bug fixes

- Fixed an issue where the Report Builder was not loading report data.
- Fixed an issue where Email Actions were stuck in a Checking state.

Known issues

- After migrating Actors to the Rocky Linux 8-based VM, Remote Integrations may fail. **Use the steps in this document (<https://docs.mandiant.com/home/msv-upgrade-rocky-linux#workaround-remote-integrations-fail-to-report-events>)** as a workaround.
- When you add the first MSI integration on a Remote Integrations Actor, the integration does not get detected. To fix this, reboot the Actor after the first MSI integration is selected for that Actor.
- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in Security Validation.
