

OCTOBER 23, 2024 MANDIANT ADVANTAGE THREAT INTELLIGENCE RELEASE

New version

Mandiant Advantage Threat Intelligence (MATI) v5.28.34

New in this release

- Added a message before the Current Requests table explaining to the user that, upon moving to the new Vector solution for Expertise cases, only Intel cases will be displayed. Intel users won't see the open cases in the new web interface because those cases won't exist in Vector yet until they migrated after they are closed.
- Updated the Advantage web interface support links to take the user to Google Cloud Support portal as well as legacy Mandiant support.

Bug Fixes

- Fixed an issue where the Current Requests table and details were not displaying the requested date.
- Fixed an issue where the Current Requests table and details were not displaying the default fallback "---" when data was not available.
- Fixed an issue where the web interface was crashing when attempting to click on an indicator.
- Fixed an issue where the link to a report related to two merged Actors was throwing a 404 error.
- Fixed an issue on the Actor Details page where the "Unknown" location label is not aligned with the icon.
