

PRODUCT UPDATE 5.14.2.0 - FEBRUARY 27, 2025

The Mandiant Advantage Security Validation (MA-SV) team is pleased to announce version 5.14.2.0 of the MA-SV platform.

Enhancements

- On Job Results pages, added a banner message to notify users when the results aren't refreshing any more.

Bug fixes

- Fixed an issue where a Remote Integration documentation link produced a 404 error.
- Fixed an issue where AEDA would only send an e-mail notification when the "Job is running" option was selected.
- Fixed an issue where Operational Status for Protected Theater and email was missing from MA-SV.
- Fixed an issue related to Job filters where displayed times didn't match input values.
- Fixed an issue where modifying a step in AEDA configuration resulted in a blank page.
- Fixed an issue where some unrestricted files could not be downloaded.
- Fixed an issue where an API-created Action resulted in an internal server error when viewed in the web interface.
- Fixed an issue where an empty logset name couldn't be deleted from a Rapid7 integration.
- Fixed an issue where the Contact Us page redirected to Google Cloud Security Contact form.
- Fixed an issue where Reports would take a long time to load.
- Fixed an issue where emails couldn't be sent or Email Profiles couldn't be verified within Email Theater.
- Fixed an issue where an SQL integration would save without populated queries.

Known issues

- When you add the first MSI integration on a Remote Integrations Actor, the integration does not get detected. To fix this, reboot the Actor after the first MSI integration is selected for that Actor.
- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in Security Validation.
