

## PRODUCT UPDATE 4.14.3.0 - MARCH 25, 2025

The Mandiant Security Validation (MSV) team is pleased to announce version 4.14.3.0 of the MSV platform.

### Enhancements

- Added a new user group right that allows for content export without any other settings permissions.
- Added support for multiple X-Header key/value pairs in Email Classification Settings.
- Simplified the Actor security update process in the web interface.
- For Google Chronicle Backstory MSI integrations, added the ability to save the Last Run Query and view the Last Run Query in the **Settings > Integrations > Test** window.

### Bug fixes

- Fixed an issue related to Protect Theater package dependencies in security updates.
- Fixed an issue where security updates were not applying to Network Actors.
- Fixed an issue where a Windows 10 VDI-based Actor reported intermittent operational status failures.
- Fixed an issue where the AEDA configuration page wouldn't load if an Actor that was used in AEDA monitors was removed.
- Fixed an issue where some restricted files couldn't be downloaded.
- Fixed an MSI Splunk integration issue where multiple alerts were returned by a query, but only the last result showed in the Job results.
- Fixed an MSI Splunk integration issue where the Correlation Query Time couldn't be edited.
- Fixed an issue where Job filter times had discrepancies in the web interface.
- Fixed an issue where a scheduled Action couldn't be changed from Run Once to Repeating.
- Fixed an issue where Protected Theater was generating new interfaces for the virtual interface.
- Fixed an issue where Protected Theater hung and did not recover when Monitor Outbound Connection was enabled.
- Fixed a Rapid7 integration issue where an empty logset name could not be deleted.
- Fixed an issue in Report Builder where a CSV export of a table missing Job Action Results resulted in Errored records.
- Fixed an issue where Directors were reporting low disk space after an upgrade.
- Fixed an issue where using certain unicode characters in Actions resulted in a crash with exceptions.
- Fixed an issue where a Protected Actor was unable to ping with ICMP rules in place.

### Known issues

- Local Event Filtering works as expected but is limited to Match Action, Match Integration, and Match Events (when the latter involves Raw Events). If a rule has a Match Event condition for any field other than Raw Event, the rule does not apply to Local Events. It only applies to events from standard local integrations in MSV.
- Network configuration may reset unexpectedly. To resolve the issue, run `vsetnet` after the upgrade with static IP addresses for one or more interfaces.

### Appliance OS Security Update

The latest platform security update can always be found on the [Validation Section of the Docs Portal](https://docs.mandiant.com/home/msv-security-patch-downloads) (<https://docs.mandiant.com/home/msv-security-patch-downloads>). This security update applies to all versions of the product and is cumulative.

### Important Installation Notes

Minimum Director version 4.12.0.0 or higher is required to upgrade to version 4.14.3.0.

To download documentation and software (appliance images, installers, and update packages) visit the [Validation Section of the Docs Portal](https://docs.mandiant.com/home/security-validation-on-prem-and-saas) (<https://docs.mandiant.com/home/security-validation-on-prem-and-saas>). For full details on how to

upgrade, see [Updating Security Validation Components \(https://docs.mandiant.com/home/msv-system-updates\)](https://docs.mandiant.com/home/msv-system-updates).
