Mandiant

PRODUCT UPDATE 5.14.5.0 - NOVEMBER 17, 2026

The Mandiant Advantage Security Validation (MA-SV) team is pleased to announce version 5.14.5.0 of the MA-SV platform.

To prepare for upcoming authentication infrastructure changes, this release introduces an in-app credential setup prompt. Following this deployment, you will continue to sign in using Mandiant Advantage SSO as usual.

To minimize disruption, after you sign in to the Director through Advantage, you will be prompted to set a local password and optionally configure two-factor authentication (2FA) using an authenticator app (such as Google Authenticator).

While you can choose **Skip for now** during your session, we recommend completing this brief setup so that your credentials are ready before we switch to direct Director sign-in on a future date.
